AMENDMENT UNDER 37 C.F.R. § 1.116 Attorney Docket No.: Q85803

U.S. Appln. No.: 10/521,572

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the

application:

LISTING OF CLAIMS:

1. (currently amended): A carrier robot system comprising:

a robot which has a placement portion for placing an object presenting a low-profile form

thereon and carries the object;

a robot controller for controlling the robot;

a teaching jig mounted on the placement portion of the robot in place of the object during

a teaching operation and having an image pickup member, the teaching jig having a positioning

mechanism with respect to the placement portion;

an image processing portion for processing an image picked up by the image pickup

member; and

a teaching control portion for controlling the robot controller and image processing

portion,

wherein the robot is installed in a semiconductor manufacturing apparatus.

2

AMENDMENT UNDER 37 C.F.R. § 1.116 Attorney Docket No.: Q85803

U.S. Appln, No.: 10/521,572

2. (currently amended): A control method for a carrier robot installed in a semiconductor

manufacturing apparatus for carrying an object presenting a low-profile shape placed at a

predetermined placement position, wherein

the method comprising the steps of:

positioning in a predetermined direction and placing a teaching jig having an image

pickup member in advance in place of an object on a placement portion of a front end of an arm

of the robot, wherein a positioning mechanism in the teaching jig with respect to the positioning

portion is used for the positioning, 7

shifting the robot to a position where the image pickup member can detect a characteristic

part existing in the vicinity of the predetermined placement position,

picking up an image including the characteristic part by the image pickup member,

determining a position of the characteristic part in a coordinate system of the image

pickup member based on the picked-up image, and

transforming a position on the coordinate system of the image pickup member into a

position on a coordinate system of the robot to determine the placement position.

3. (original): The control method for a carrier robot according to Claim 2, wherein

a transformation matrix for transforming a relationship between the coordinate system of

the image pickup member and the coordinate system of the robot in translation and rotation is

determined in advance, and

3

AMENDMENT UNDER 37 C.F.R. § 1.116 Attorney Docket No.: Q85803

U.S. Appln. No.: 10/521,572

the position of the characteristic part in the coordinate system of the image pickup member is transformed into a position in the coordinate system of the robot.

 (previously presented): The control method for a carrier robot according to Claims 2, wherein

the jig is removable from the placement portion during conveyance of the object presenting a low-profile form.

5. (previously presented): The control method for a carrier robot according to Claim 2, wherein

the characteristic part is a hole, a pin, a mark, or a letter pattern.
